MANAGED E-MAIL GATEWAY SERVICE

Version: 2.1

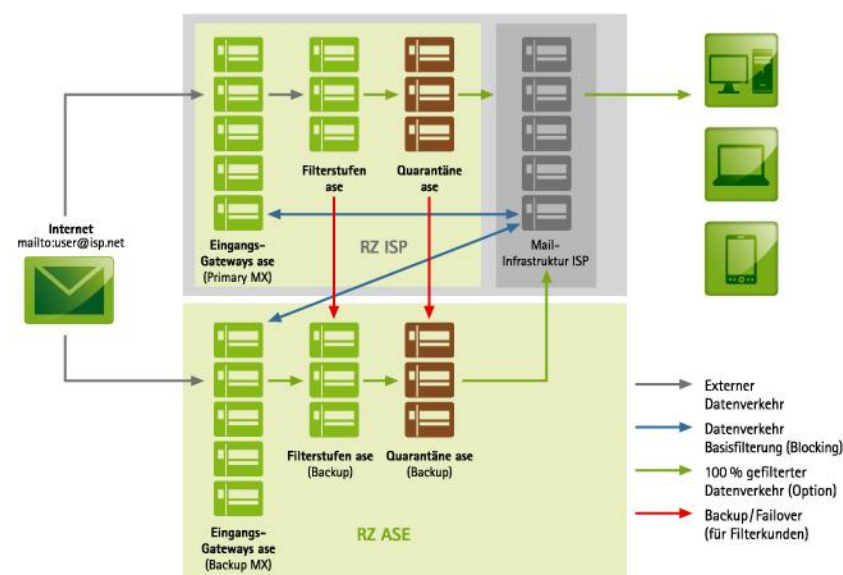

COMPETITIVELY-PRICED, EFFECTIVE INFRA-STRUCTURE PROTECTION & EASY ACCESS TO ALL PREMIUM SERVICES OF ANTISPAMEUROPE

Our managed e-mail gateway service provides the best e-mail security solution for e-mail providers.

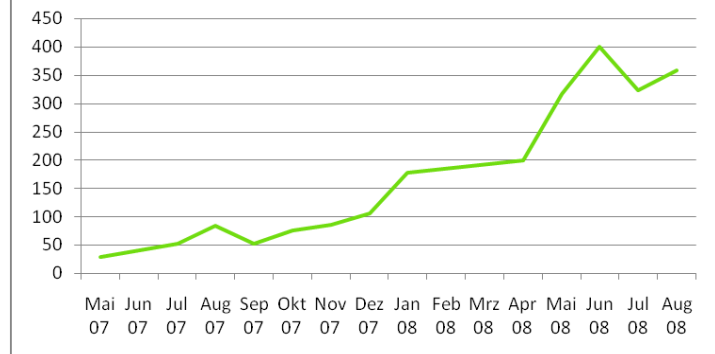

Rapidly increasing spam levels are growing into a serious nuisance especially for providers of e-mail services. High spam levels lead to increased e-mail server load – the demand for processing power, memory and transmission capacity is continually increasing. And spam filters cause considerable administrative work.

Users hardly note providers' increased efforts and are accordingly not ready to pay higher prices. Providers' only chance to meet increased pressure on margins is by differentiating themselves in the market through value added services.

antispameurope's managed e-mail gateway service offers the ideal solution. The basic service protects and relieves the infrastructure at attractive prices. The users may optionally add extra services. They offer attractive margins to the provider and provide a competitive edge over the competition. User e-mails are simply directed via antispameurope's fully managed gateways. Depending on the number of e-mail users, gateways are located either at the provider's or antispameurope's computer centers.

Spam / Clean

Basic services already comprise active protection from DoS (Denial of Service) attacks and spam waves. An average blocking rate of over 99% effectively relieves the subsequent infrastructure.

Individual users may optionally order all antispameurope premium services – e.g. spam filters guaranteeing 99.9% detection, 100% e-mail archiving or automated digital signatures for outbound e-mails.

The additional services can be directly activated by users by means of the provider's website.

CHARACTERISTICS – SUMMARY

Basic Spam Protection

- Spam blocking with an average blocking rate of presently over 99 %
- Active protection from DoS (Denial of Service) attacks
- Load balancing and hot fail over via antispameurope infrastructure – uninterrupted e-mail traffic during attacks, overload or system malfunction
- Central system management by antispameurope with 24/7 monitoring
- Alternative hosted managed service within antispameurope's computer centers or managed services within the providers' computer centers (starting at 25,000 e-mail users)

Premium Services

(may be added for each e-mail user individually)

- Premium spam filter service guaranteeing a 99.9% detection rate and at the same time less than 0.0004% false positives plus virus protection
- E-Mail continuity service – 100 percent e-mail availability through an e-mail stand-by system
- Fully automated, legally compliant e-mail archiving
- Automated e-mail signature via S/MIME
